

FLOW-TEK
MODEL HP | HX
INSTRUMENTATION SERIES
Threaded Standard Port Ball Valves

Flow-Tek’s Instrumentation Series ball valves offer rugged reliability for high pressure and instrumentation applications. The valves feature three piece bodies designed for flexibility of installation and ease of maintenance. Both models HP and HX are constructed as standard with 316 stainless steel bodies manufactured to NACE specifications. Other body materials are available such as Duplex

SS, Hastelloy®, Monel and Titanium. All bodies are marked with a heat code for full material traceability.

A floating ball design provides a positive, bubble tight shut off with smooth quarter turn operation at low operating torque. Additional Instrumentation Series advantages include a choice of lever or pointer handles, travel limit stop pins and

replaceable seats and seals. Locking kits which secure the valve in a desired position are also available.

Safety features include an internally loaded blow-out proof stem and end connections that are pinned to prevent inadvertent loosening or disassembly. Actuator Mounting: Model HP and HX valves are available with actuator mounting drilling as an option.

Model	Size	Pressure Rating	Temperature Range	End Connections	Body Material
HP	1/4" to 1" 8 to 25 mm	6,000 psi	-40°F to +280°F -40°C to +138°C	Standard: NPT Optional: Compression Fittings	Stainless Steel
HX	1/4" to 1/2" 8 to 15 mm	10,000 psi	-29°F to +500°F -34°C to +260°C
